# Gobinath Rangaraj

**Senior AI Product Engineer | RAG, LLM Agents & Text-to-SQL Analytics | React, Angular, TypeScript**

Chennai, Tamil Nadu, India | +91 96004 61264 | linkedin.com/in/rgobinath | github.com/gobigobs | gobigobs.github.io

## PROFESSIONAL SUMMARY

Senior AI product engineer with 11+ years shipping production platforms, building LLM products end to end: a Claude text-to-SQL analytics API over BigQuery (governed semantic layer, validated execution, guardrails, cost caps), AI chat and agentic dashboards, and server-side tracking for Shopify. At Crigloo I lead frontend architecture for its digital marketing platform and, for the last 1.5 years, AI product work on Cignify, its AI e-commerce analytics platform. Measured builder: 90-question Retrieval-Augmented Generation (RAG) evaluation lab across 5 retrievers (cross-encoder rerank best, 94%); IBM Generative AI certified (August 2026).

## CORE SKILLS

**Frontend:** Angular 20, React 18, React Native, Remix, TypeScript, JavaScript, RxJS, Tailwind, Highcharts

**AI / GenAI:** Retrieval-Augmented Generation (RAG), LLM agents, LangChain, LangGraph, LLM APIs, text-to-SQL, semantic layer, analytics engineering, vector databases, vector search, embeddings, chunking, hybrid retrieval (RRF), cross-encoder reranking, retrieval evaluation, evaluation harnesses, grounded answers, prompt engineering, chatbot development, MCP developer tooling

**Backend & Cloud:** Python, Node.js, GCP (Cloud Run, Cloud SQL, Pub/Sub, Cloud Scheduler), AWS, BigQuery, REST APIs, API design, PostgreSQL/MySQL, Git

**E-commerce & Analytics:** Shopify (Polaris, Prisma, Remix), GTM, GA4, server-side tracking (sGTM), first-party tracking, consent management (GDPR), A/B testing

**Practices:** Frontend architecture, WCAG, state management, validated execution, cost optimization, team mentorship

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer — Crigloo

May 2017 – Present

Digital marketing platform for SMBs and agencies (Creative Igloo) | India

**Crigloo product** — digital marketing, run campaigns

- Lead frontend architecture for a digital marketing platform (Angular 20, Shopify React, React Native), covering A/B testing, campaign automation and user-journey insights.
- Built Angular 20 dashboards with 6+ dynamic modules, boosting reporting efficiency by 35%.
- Drove 70% campaign engagement growth through optimized UI workflows and automation.
- Cut API traffic by 40% with centralized RxJS state management.
- Shipped a bulk-edit engine and AI chatbot that slashed campaign setup time by 60%.
- Implemented GTM + GA4 ecommerce tracking and web pixel authentication; integrated AWS, Python and Node services; mentored team members; delivered WCAG-compliant interfaces.

**Cignify product** — AI e-commerce analytics and attribution platform for Shopify | Apr 2025 – Present

- Built the Cignify ACC direct API for text-to-SQL (Node/Express + BigQuery + Claude, Oct 2026): a YAML semantic layer defining ~28 business metrics mapped once to tables, columns and joins; LLM proposes, deterministic code validates and executes read-only queries, with SQL guardrails, dry-run cost checks, maximumBytesBilled and daily token caps, 2 self-repair retries, and a narrative check that every number exists in the data; 35 tested saved queries (LTV, cohort, CAC, repeat rate, ROAS/CPA, attribution) plus a golden test harness.
- Built the Cignify AI Command Center (Iris analyst): AI chat and insights dashboards with SQL-backed grounded answers, step streaming, Highcharts and PDF/CSV/JSON export, 8-turn context; plus an agentic dashboard copilot with memory and JSON-driven actions, and an AI Executive Summary drafting a 9-slide deck.
- Shipped the Shopify app “GTM & Data Layer”: embedded app for GTM, server-side tracking and GDPR consent with no theme-code edits (Remix, React, Polaris, Prisma), launched via custom distribution — including subscription billing (trials, discounts, plan changes, server-checked coupons).
- Built Spark Pixel and first-party tracking, including a 400-day first-party cookie on iOS shipped in about a week; delivered GoDaddy second-party Shopify setup and server-side tracking work.
- Ran Cignify services on GCP: Shopify app on Cloud Run, Python dashboard APIs as GCP APIs, Cloud SQL via Auth Proxy, Pub/Sub webhook delivery, BigQuery cost guards, and a daily token-refresh endpoint for Cloud Scheduler.
- Used MCP-based developer tooling (BigQuery toolbox, Shopify Dev MCP) across AI workflows; top contributor by commit history on the Cignify Shopify and dashboard apps.

### UI Developer — Netmeds.com
Oct 2016 – May 2017

High-traffic online pharmacy | Chennai, India

- Built user interfaces for a high-traffic healthcare e-commerce platform, translating designs into responsive production pages.
- Streamlined the checkout UI and optimized rendering and interaction performance.
- Stack: React, Magento2, HTML5/CSS3, PHP, JavaScript, AWS, MongoDB.

### Associate Technical Analyst — OREOPS Low Code Platform
May 2015 – Sep 2016

Low-code platform | Chennai, India (on-site)

- Built dynamic UI frameworks for rapid screen and report generation on a low-code platform, working on controls, properties, methods and events.
- Stack: .NET/C#, jQuery, Bootstrap, Ajax, JSON, Kendo UI.

## SELECTED PROJECTS

**RAG Document QA System** — Portfolio Project | github.com/gobigobs/rag-chatbot
Retrieval-Augmented Generation (RAG) document Q&A: ingestion, chunking, sentence-transformer embeddings, hybrid retrieval and grounded answers. Built a 90-question evaluation lab across 5 retrievers (TF-IDF, BM25, SBERT, Hybrid RRF, cross-encoder rerank); cross-encoder rerank was best at 94%. Key finding: the retriever was not the limit — the corpus was. LangChain + Python, with a usable frontend.

**Ask Gopi — RAG Chatbot Demo** — Live demo | gobigobs.github.io
Grounded RAG chatbot demo with retrieval-based answers over a document corpus, with abstention on low-similarity retrieval, presented as a complete product at gobigobs.github.io.

**Shopify & E-commerce Development** — Client Work
React and Shopify storefront work: store setup, customisation and UX improvements, combining storefront performance with conversion-focused design.

## CERTIFICATIONS

**IBM — Develop Generative AI Applications: Get Started**, August 2026. Skills: RAG, LangChain, Generative AI, Prompt Engineering.

**Claude Certified Architect – Professional (CCAR-P)**, Anthropic — in progress (2026).

## EDUCATION

**B.Tech / B.E., Computer Science — Gnanamani College of Engineering**, May 2011 – Apr 2015.

---

**Target roles:** Senior AI Product Engineer · Forward Deployed Engineer · Senior Frontend Engineer · Frontend Lead — Chennai hybrid or remote from India.
